probable serine/threonine protein kinase (EC 2.7.1.-) - yeast (Saccharomyces cerevisiae)
probable serine/threonine protein kinase (EC 2.7.1.-) - yeast (Saccharomyces cerevisiae)
N;Alternate names: protein YAL002; protein YAL017w; secretory protein SSP138
C;Species: Saccharomyces cerevisiae
C;Date: 30-659-1993 #sequence revision 02-Aug-1994 #text_change 16-Aug-2004
C;Accession: S33653; S36717; S36732; JH0486
R;Clark, M.W.; Zhong, W.W.; Keng, T.; Storms, R.K.; Ouellette, B.F.F.; Barton, A.; Kabac
Yeast 9, 543-549, 1993
A;Title: The YAL017 gene on the left arm of chromosome I of Saccharomyces cerevisiae end
A;Reference number: S33653; MUID:3311122; PMID:8322517
A;Accession: S33653
A;Clark, M.W.; Zhong, W.W.; Keng, T.; Storms, R.K.; Zhong, W.; Zeng, B.; Fortin, N.; I
Submitted to the EMBL Data Library, January 1993
A;Reference number: S36711
A;Accession: S36717
A;Accession: S36717

No. is the number of results predicted by chance to have a score greater than or equal to the score of the result being printed, and is derived by analysis of the total score distribution.
                                                                                                                                                                                                                                                                            Score

Sequence 8, Application US/09237543A

Patent No. 6143540

GENERAL INFORMATION:

APPLICANT: Kapeller, Rosana

TITLE OF INVENTION: NOVEL MOLECULES OF THE HKID-1-RELATED PROTEIN FAMILY

TITLE OF INVENTION: AND USES THEREOF

FILE REFERENCE: 035800/175631

CURRENT APPLICATION NUMBER: US/09/237,543A

CURRENT APPLICATION NUMBER: US/09/237,543A

CURRENT FILING DATE: 1999-01-26

NUMBER OF SEQ ID NOS: 11

SOFTWARE: Patentin Ver. 2.0

SEQ ID NO 8

LENGTH: 313

TYPE: PRT

ORGANISM: Rattus norvegicus
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  Query

; Sequence 26, Application US/08461379A
; Patent No. 5871961
; Patent No. 5871961
; Patent No. 1871961
; GENERAL INFORMATION: Smith, Kendall A. & Beadling, Carol
; TITLE OF INVENTION: Nucleic Acids Encoding CR5 Polypeptide,
; TITLE OF INVENTION: Vector and Transformed Cell Thereof, and
; TITLE OF INVENTION: Expression Thereof
; NUMBER OF SEQUENCES: 35
; CORRESPONDENCE ADDRESS:
; ADDRESSEE: Ratner & Prestia
ADDRESSEE: . (B) STREET:One Westlakes-Berwyn
                                                                                                                                                                                                 Ś
                                                                                                                                                                              밁
                                                                                                                                                                                                                         밁
                                                                                                                                                                                                                                      δ

                                                                                                                                                                                                                                                                                                                                                                                                                                                                         밁
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        밁
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             8
                                                                                            Sequence 26, Application US/08465585C

Patent No. 6027914,
GENERAL INFORMATION:
APPLICANT: Smith, K. A., & Beadling, C.
TITLE OF INVENTION: Nucleic Acids Encoding CR6 Polypeptide, Vecto
TITLE OF INVENTION: Transformed Cell Thereof, and Expression Thereof
NUMBER OF SEQUENCES: 35
                                                      NUMBER OF COURSES

No. is the number of results predicted by chance to have a score greater than or equal to the score of the result being printed, and is derived by analysis of the total score distribution.
                                                                                                                                                                                                                                                                                                                           Score

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          The invention describes a method of modulating the level or activity of human HKID-1 polypeptide, a member of serine/threonine kinase superfamily. The method involves contacting a cell expressing the polypeptide or nucleic acid with an agent to modulate the level or activity of polypeptide, or level of nucleic acid molecule. The method is useful for modulating the level or activity of HKID-1 polypeptide or polynucleotide in a subject having or predisposed to having a disorder involving cancer. Modulating HKID-1 expression or activity is useful for therapeutic purposes, for treating cellular proliferative and/or differentiative disorders including cancer or haematopoietic neoplastic disorders e.g. Acute promyeloid leukaemia (APML), Chronic myelogenous leukaemia (CML) and Waldenstrom's macroglobulinaemia (WM). This is the amino acid sequence of a mouse protein kinase phosphorylation site
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               Example
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  cell expressing the polypeptide with a modulator of the polypeptide.

                                                                                                                                                                  Alignment
                                                                                                                                                                                                                                                                                             The present invention relates to a method of identifying pain-regulating compounds, involving screening candidate compounds for interaction with PIM1 or PIM3 kinase. PIM1 and PIM3 proteins and coding sequences are useful for treating chronic pain, particularly of neuropathic or inflammatory origin (e.g. where associated with diabetes, cancer, AIDS or inflammatory origin (e.g. where associated with diabetes, cancer, AIDS or
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         Method for identifying analgesics, chronic pain, by screening compound kinase, or related compounds.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               Murine PIM1 kinase.

New human or murine PIM-3 DNAs or polypeptides, useful for as agent for identifying anti-type 2 diabetes mellitus drugs, or treating insulin resistance or type 2 diabetes mellitus. a screening

Page 40; 40pp; English.

The present sequence is the protein sequence of the murine serine/threonine protein kinase and proto-oncogene, PIM-1. PIM-1 prote are the paralogues of novel human and murine PIM-3 proteins (see ABR62 and ABR6293)) of the invention, which are therefore expected to be involved in cancer and cell growth regulation. PIM-3 is also involved the development of insulin resistance and type 2 diabetes mellitus. Th invention relates to the use of PIM-3 nucleic acids and proteins in: screening assays for compounds that modulate insulin resistance or type diabetes mellitus; detection assays for detecting insulin resistance or type 2 diabetes mellitus (e.g. chromosomal mapping, tissue typing, forensic biology); predictive medicine (e.g. diagnostic or prognostic assays, monitoring clinical trials, pharmacogenomics); and for the preparing a medicament for the treatment of insulin resistance or type diabetes mellitus proteins

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 CC The invention relates to a novel transgenic mouse whose genome comprises CC a nucleic acid construct comprising a promoter having a fully defined CC nucleotide sequence comprising 310 bp (ADN97341), where the promoter is CC operably linked to c-myc having a fully defined nucleotide sequence CC comprising 1320 bp (ADN97342) where the c-myc protein encoded is CC expressed in prostate cells of the transgenic mouse at detectable levels. CC The transgenic mouse can be used as an in vivo model system for the study CC of prostate cancer and its progression. It can also be used in CC preclinical and clinical models to test novel diagnostic and therapeutic CC modalities including drug therapies relevant to prostate cancer CC modalities including drug therapies relevant to prostate cancer CC identify molecular markers that can be mediators of progression.

CC identification of the mediators is useful since they are potential CC therapeutic targets. The present sequence represents murine Piml.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          US-10-705-757-5

The present invention relates to a method of designing a ligand binding to a target molecule. The method involves identifying as molecular scaffolds compounds binding to members of a molecular family, detecting orientation of scaffolds at a binding site of target, and synthesising ligand. The invention is useful for designing drug products and for designing ligand binding to target molecules such as nuclear hormone receptors, TNF receptors, G-protein coupled receptors, methyl transferases, ligases, etc. The present sequence is the Mus musculus PIM
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      Molecular
G-protein
                                                                                                                                                                   Designing a ligand binding to a target molecule, comprises identifying molecular scaffolds compounds binding to members of a molecular family, detecting orientation of scaffolds at a binding site of target, and synthesizing ligand.
                                                                                                                                           Disclosure;

                                                                                                        US-10-705-757-5
                                                                                                                                                                                                                                                                                                                                                                            The invention describes a method of modulating the level or activity of human HKID-1 polypeptide, a member of serine/threonine kinase superfamily. The method involves contacting a cell expressing the polypeptide or nucleic acid with an agent to modulate the level or activity of polypeptide, or level of nucleic acid molecule. The method i useful for modulating the level or activity of HKID-1 polypeptide or polymucleotide in a subject having or predisposed to having a disorder involving cancer. Modulating HKID-1 expression or activity is useful for therapeutic purposes, for treating cellular proliferative and/or differentiative disorders including cancer or haematopoietic neoplastic disorders e.g. Acute promyeloid leukaemia (APML), Chronic myelogenous leukaemia (CMI) and Waldenstrom's macroglobulinaemia (MM). This is the action acid accurace of a rat protein kinase phemorylation acids accurace.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           Modulating levels or activity of HKID-1 polypeptides, a member of serine/threonine kinase superfamily, for treating cancer, by contacting cell expressing the polypeptide with a modulator of the polypeptide.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          HKID-1; serine/threonine kinase; cellular proliferative disorder; differentiative disorder; cancer; haematopoietic neoplastic disorder; Acute promyeloid leukaemia; APML; Chronic myelogenous leukaemia; CML; Waldenstrom's macroglobulinaemia; WM; rat.
                                                                                                                                                                                                                                                                                                                      Sequence

PIM1 and PIM particularly of neuropathic or useful for treating chronic pain, particularly of neuropathic or inflammatory origin (e.g. where associated with diabetes, cancer, AIDS or neurodegenerative diseases). The present sequence is rat PIM1 kinase
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      Sequence 313

Example 2; Page 39; 40pp;

English.

The present sequence is the protein sequence of the rat serine/threonine protein kinase and proto-oncogene, PIM-1. PIM-1 proteins are the paralogues of novel human and murine PIM-3 proteins (see ABR62932 and ABR62933) of the invention, which are therefore expected to be involved in cancer and cell growth regulation. PIM-3 is also involved in the development of insulin resistance and type 2 diabetes mellitus. The invention relates to the use of PIM-3 nucleic acids and proteins in:

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   S
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              밁
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  Ş
                                                                                                                                                                            The present sequence is the protein sequence of human Piml, a protein related to tyrosine threonine kinase (TTK, see ABP54938). TTK polynucleotides and polypeptides of the invention encompass polynucleotides and polypeptides having sequence similarity or sequence identity to human TTK and other genes and gene products related to TTK, such as Piml. The invention is based on the finding that TTK is differentially expressed in various forms of cancer. It provides methods for the identification of cancerous cells, especially breast cancer and colon cancer cells, by detection of expression levels of TTK, as well as diagnostic, prognostic and therapy. Assays for identifying molecules that modulate the activity of these genes in cancers, as well as methods of inhibiting tumour growth by inhibiting the activity of TTK are also
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           Reducing growth of cancer cells comprises reducing Tyrosine Threonine Kinase (TTK) activity, useful in diagnosing and treating disorders with abnormal expression levels and activity of TTK, such as lung, colon,
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      WPI; 2002-698650/75.

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             Macbeth
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     disorder;
```

The invention describes a method of modulating the level or activity of human HKID-1 polypeptide, a member of serine/threonine kinase superfamily. The method involves contacting a cell expressing the polypeptide or nucleic acid with an agent to modulate the level or activity of polypeptide, or level of nucleic acid molecule. The method is useful for modulating the level or activity of HKID-1 polypeptide or polymucleotide in a subject having or predisposed to having a disorder involving cancer. Modulating HKID-1 expression or activity is useful for therapeutic purposes, for treating cellular proliferative and/or differentiative disorders including cancer or haematopoietic neoplastic disorders e.g. Acute promyeloid leukaemia (APML), Chronic myelogenous leukaemia (APML) and Waldenstrom's macroglobulinaemia (WM). This is the Modulating levels or activity of HKID-1 polypeptides, a member of serine/threonine kinase superfamily, for treating cancer, by contacting cell expressing the polypeptide with a modulator of the polypeptide. Example Page 40-41; 48pp; English.

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              The present invention relates to a method of identifying pain-regulating compounds, involving screening candidate compounds for interaction with PIMI or PIM3 kinase. PIMI and PIM3 proteins and coding sequences are useful for treating chronic pain, particularly of neuropathic or inflammatory origin (e.g. where associated with diabetes, cancer, AIDS or neurodegenerative diseases). The present sequence is human PIMI kinase
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               Sequence 313
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               Claim
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  Method

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        밁
The invention relates to detecting cancer (other than ovarian cancer) in a subject, comprising comparing the expression levels of tyrosine threonine kinase (TTK, a mitotic checkpoint gene) polypeptide or polymucleotide in a test cell obtained from the subject and in a normal non-cancer cell, where an increase in the expression level of TTK protein or nucleic acid in the test cell compared to that in the normal cell, indicates the presence of cancer other than ovarian cancer. Also included are reducing growth of a cancerous cell (by contacting a cancerous cell with an amount of an agent effective to reduce TTK polypeptide activity in the cell), an assay for identifying a candidate agent that reduces growth of a cancerous cell (comparising: (1) detecting the activity of a TTK polypeptide in the presence of a candidate agent; and (ii) comparing the activity of TTK polypeptide in the presence of a candidate agent
                                                                                                                                                                                                                                                                                                                                                                                                         Disclosure, Page 34-35;

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             CC relative to TTK polypeptide activity in the absence of the candidate CC agent), identifying an agent that reduces TTK activity (comprising: (i) CC contacting cancerous cell displaying elevated expression of a TTK-CC encoding polymucleotide with a candidate agent; and (ii) determining the CC effect of the candidate agent on TTK polypeptide activity) and assessing CC the prognosis of a cancerous disease other than ovarian cancer in a CC subject (comprising: (i) detecting expression of TTK -encoding CC polymucleotide in a test cancer cell of a subject; and (ii) comparing a CC level of expression of TTK-encoding polymucleotide in a control non-CC cancer cell, where the level of expression of TTK in the test cancer cell crelative to the level of expression in the control non-cancer cell; is CC indicative of the prognosis of the cancerous disease). The methods are useful for detecting cancer (other than ovarian cancer) in a subject, CC reducing growth of cancerous cells, identifying a candidate agent that CC activity and assessing the prognosis of a cancerous disease other than ovarian cancer. The methods are also useful for determining the ability of a subject to respond to a particular therapy e.g. as a basis of CC rational therapy. The present sequence represents a closely related CC protein to human TTK, in this case human PIMI (not defined)
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  Sequence 313
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               No:

cc serine/threonine protein kinase and proto-oncogene, PIM-1 Proteins cc are the paralogues of novel human and murine PIM-3 proteins (see ABR62932 cc and ABR62933) of the invention, which are therefore expected to be crimvolved in cancer and cell growth regulation. PIM-3 is also involved in che development of insulin resistance and type 2 diabetes mellitus. The cc invention relates to the use of PIM-3 nucleic acids and proteins in: cc screening assays for compounds that modulate insulin resistance or type 2 diabetes mellitus, detection assays for detecting insulin resistance or type 2 diabetes mellitus (e.g. chromosomal mapping, tissue typing, cc forensic biology); predictive medicine (e.g. diagnostic or prognostic cassays, monitoring clinical trials, pharmacogenomics); and for the cc preparing a medicament for the treatment of insulin resistance or type 2 diabetes mellitus

CC claimed are a vector, a method for identifying a nucleotide, a host cell comprising the vector, a method for identifying a nucleotide sequence cc which is differentially regulated in an animal subjected to pain and a cc kit to perform the method, an array, a method for identifying an agent that increases or decreases the expression of the polynucleotide sequence cc that is differentially expressed in neuronal tissue of a first animal cc subjected to pain, a method for identifying an agent compound that regulates the activity of one or more of the expression of a polynucleotide sequence which is differentially cc expressed in an animal subjected to pain, a method for identifying a compound which regulates the activity of one or more of the polynucleotides, a method for producing a pharmaceutical composition, a compound that regulates the activity in an animal of one or more of the polynucleotides, a method for identifying a compound useful in treating cc pain and a pharmaceutical composition comprising the one or more complypeptides or their antibodies. The polynucleotide or the compound that cc polypeptides or their antibodies. The polynucleotide or the compound that composition comprising a medicament for treating compain (e.g. spinal segmental nerve injury (Chung), chronic constriction confur confur construction which is a differentially expressed during pain. Note: the sequence data for this patent did not form part of the printed confusion, but was obtained in electronic form directly from WIPO at confusion to the confusion of the printed confusion of the printed
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       RESULT 14

                                                                                                                                                                                                                                                                                                         The present invention relates to a method for identifying a ligand (L), which binds to an inactive conformation of target protein kinase (T). The method involves contacting inactive conformation of (T), which contains or is modified to contain a reactive group at or near a binding site of interest, with one or more ligand candidates capable of covalently bonding to the reactive group thus forming a kinase-(L) conjugate (C). The method is useful for identifying protein kinase inhibitors that preferentially bind to inactive conformation of a target protein kinase. The present sequence is a protein kinase which may be modified via an amino acid substitution, for use in the method of the invention.
                                                                                                                                                                                                                                                                                                                                                                                                                                                          Identifying ligand binding to inactive conformation of target protein kinase (T) comprises contacting the conformation modified (T) which contains reactive group at binding site, with ligands and detecting kinase-ligand conjugate formation.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            ADF45083 standard; protein;

No. is the number of results predicted by chance to have a
ore greater than or equal to the score of the result being printed,
is derived by analysis of the total score distribution.
